

The Firegate Fully Hosted Virus and Spam Email Security Solution

Most of the time it's just better to leave it to the experts. At Wiresoft we believe this. It is why we are introducing our Email Spam and Virus Security Solution. Hosted by our SAS 70 II certified site, we can provide you with a simple, sophisticated and affordable way to insure all your incoming and outgoing emails are free of any viruses or spam. Our technology has never been compromised by a virus, and our Spamwall is able to stop 100% of unsolicited email while delivering 100% of "Real Mail" to its intended audience.

Complete Virus Protection It all starts with our technology. Firegate blocks and quarantines viruses at the gateway—literally preventing your network from contamination. We update virus definitions instantaneously resulting in "real time" email protection from malicious threats. We all know the damage a virus causes to a business—with Firegate you have a 24/7 safeguard that acts in a proactive manner giving you peace of mind. Firegate works stealthily in the background making sure all email—incoming and outgoing—is thoroughly analyzed. Nobody wants to be the one who sent out the infected email...We eliminate the reverse threat as well.

100% Spam Solution The Firegate Spamwall has been thoroughly tested by independent experts and has yet to be infiltrated! Our Spamwall incorporates a uniquely designed challenge/response system which eliminates 100% of unwanted email before it can carry trojans, cookies, viruses, malware, spyware, phishing or any other outside threat that could embed itself into your email. Our program includes a component that allows you to easily configure the Spamwall to accommodate your special needs. Ultimately, Spamwall only allows email through to your inbox which you have given permission to enter! Our technology ensures a simple, safe and secure email environment. You will hardly know it's there, performing at the highest security levels possible—protecting your business 24/7.
